\*Kerb weight is affected by many factors such as bodystyles, engines and options. It is the weight of a standard-specification base series vehicle, including fluids and approximately 10 litres of fuel. It does not include the driver 75 (kg), crew or cargo \*\*Payload within this guide is the difference between gross vehicle weight (GVW) and kerb weight. Payload includes the driver 75 (kg). It must be taken into account that actual weight will always be subject to manufacturing tolerances which may result in payload variations between this guide and actual weight. For customers intending to load the vehicle close to the maximum payload, we recommend you also add 5% of kerb mass to the kerb weight figure to reduce the risk of overloading NB: It is the responsibility of the vehicle operator to ensure their vehicle is legally compliant for road use.

\*\*\*\*Figures shown are for comparability purposes; only compare fuel consumption, CO2 figures and range with other cars tested to the same technical procedures. These figures may not reflect real life driving results, which will depend upon a number of factors including the accessories fitted (post-registration), variations in weather, driving styles and vehicle load.
